

# *DASHBOARD*

Version 1.0

Dashboard is a free program to monitor and display active [NetLogger](#) amateur radio nets. It uses the NetLogger XML API to obtain its data. It will automatically refresh its data display about every 30 seconds, (which is about 28 more seconds than what it will take for you to **figure out** how to use this program) It is perfect for **full-screen** monitoring of a net as it progresses.

There are no logons or call signs required to use this program as the NETLOGGER XML API is a read-only interface. Simply start the program and choose the net you wish to see from the menu.

You can hide data fields you are not interested in to simplify your view of the net. You can also reorder the columns by clicking and dragging column headers to a new position. The program will remember your choices for the next time you run the program. Double-clicking on a log entry will open your default web browser and display the QRZ.com entry for the given callsign.

This program is just the start of an idea, a project 'itch' that I needed to scratch. There is plenty of potential for further development.

Questions? Comments? Suggestions?
